Manual → Automation Conversion Plan

Mentora E2E · Jira → Cypress · 16-week roadmap
dev.mentoraeg.com · 12 Jul 2026 · **Updated 20 Jul 2026**

Story Automation (now)	Test Case Coverage (now)	Target (4 months)	Cypress Tests
18%	**16%**	**50%**	**570 → 1100**
19 / 104 stories	154 / 978 TC keys	~490 TC keys automated	40 Cypress files

Strategy: Automate by Story priority, not raw TC count. Every `it()` block must include the Jira key `MEN-XXXX`. Exclude mobile-native and infrastructure stories from the 50% target.

📌 Progress Update — 20 Jul 2026 (8 days in)

Cypress Tests
570 → 625
+55 tests · 40 → 43 spec files

Story Coverage
18% → 20%
19/104 → 21/105 (9 tagged + 12 verified untagged)

Done-TC Coverage
13.3%
45 / 339 "Done" test cases (new metric — stricter than raw TC %)

Open Gap
48
Done stories still with zero Cypress evidence

Newly automated since the 12 Jul plan

Area	What was added	Files
DONE Password Policy — live checklist popover	Reverse-engineered the `#password-checklist-password` popover (opens on focus, live-updates per keystroke); discovered the register form's `submit` handler calls `preventDefault()` client-side, so no `/register` request is ever sent for a non-compliant password. Rewrote weak-password negative tests around that fact + added 3 popover tests.	`regestration/password_policy_*.js, .csv`
DONE MEN-1726 / MEN-2135–2167 — Instructor Assistants	Full permission-matrix suite: create/login/deactivate assistant, per-permission access checks (courses, curriculum, pricing, live sessions, roster, grading, earnings, withdrawals), menu visibility by role. 33 test cases.	`instructor_assistants/instructor_assistants.MEN-1726.cy.js`
DONE MEN-231 — Instructor ID Verification	End-to-end: register → verify email → upload ID → admin approves in `/admin/verifications` → publish gate lifts. Plus 4	`instructor_verification/instructor_verification.MEN-231.cy.js`

	negative/access-control cases. 11 test cases.	
NEW FEATURE Multi-field course search (no Jira key yet)	`HomeController` now splits the search query into words and matches each against title, category chain, and instructor names (AND across words, OR across fields). Logic verified against the live dev API before writing 16 test cases.	`course_managment/course_search_multiword.cy.js`
DONE MEN-1457 / MEN-2197 — XPay migration	Checkout against the new XPay API + webhook signature validation — closes the "Partial" status this item had in the Priority Queue below.	`payment/xpay_checkout.cy.js`
DONE MEN-1718 — Parent phone number	Diagnostics + audit pass on the register/settings parent-phone field validation.	`parent_phone/parent_phone.cy.js`
STABILIZED MEN-1637–1677 — Curriculum Builder	Fixed a real bug class: clicks resolving to 2+ elements (`cy.click() can only be called on a single element`), caused by `force: true` clicks incorrectly combined with a `:visible` filter.	`curriculum/curriculum_builder.cy.js`

Still true — carried over unresolved from Week 1 checklist

- MEN-2005 Instructor Finance — **still the #1 zero-coverage priority**, untouched since 12 Jul
- `MEN-XXXX` prefix still missing on 12 of the 21 "covered" stories — coverage can only be verified by manual review, not by `grep`/CI, until this is fixed
- Jira Parent-key linkage still broken: only 13 / 966 test cases link to a Story (was ~13/978)

Coverage Targets

Milestone	Story %	TC %	Cypress Tests
Now	18%	16%	570

Month 1	30%	25%	700
Month 2	40%	35%	850
Month 4	50%	50%	1100

Phase 1 — Foundation (Weeks 1–2)

Foundation & Quick Wins

Target: +80 TCs · 3 stories

- Link all Jira TCs to their Parent Story (AgileTest / Parent key)
- Add `MEN-XXXX` prefix to every existing `it()` block
- CI: `cypress run` + JUnit report → Azure DevOps
- Stabilize flaky tests: login, navigation auth, flatpickr
- Start MEN-2005 Instructor Finance (read-only + PDF export)

Phase 2 — High ROI (Weeks 3–6)

High-ROI Features

Target: +200 TCs · 8 stories

- MEN-2005 — full Instructor Finance suite (12 TCs)
- MEN-1956 — purchase currently running sessions
- MEN-1724 — student attendance system
- Payment regression: XPay webhook, Apple Pay, voucher edge cases
- Live Sessions: expired course link-list test (Full Payment path)

Phase 3 — Core Platform (Weeks 7–10)

Core Platform Coverage

Target: +250 TCs · 15 stories

- Course Management — archive, publish, pricing (PPS vs Full Payment)
- Notifications — unified inbox, WhatsApp CRM (MEN-1727)
- RBAC — permission matrix for every admin role
- Auth — parent phone edge cases, email verification negative paths
- Roster — mobile + desktop parity (MEN-1314–1319)

Phase 4 — Scale (Weeks 11–16)

Scale & Maintain → 50% Coverage

Target: 50% TC key coverage

- Page Object Model for the top 5 flows
- Shared helpers: `createCourse()`, `createSession()`, `enrollStudent()`
- Nightly full suite on staging · smoke on dev after deploy
- Automation dashboard: Jira TC status synced from Cypress results

Priority Queue — Top 10 Stories

#	Key	Feature	TCs	Effort	ROI	Reason
1	MEN-2005	Instructor Finance	12	M	High	Still 0% — top priority, unchanged since 12 Jul
2	MEN-1555	Live Sessions shared	4	S	Done	Automated 20 Jul — `live_sessions.cy.js`
3	MEN-1457	XPay migration	20	M	Done	Automated 20 Jul — `xpay_checkout.cy.js` + webhook signature
4	MEN-1727	WhatsApp CRM	15	L	High	Still partial — whatsapp_integration only covers low-level API TCs
5	MEN-1956	Buy running sessions	8	M	Medium	Revenue-critical path — still 0%
6	MEN-1724	Attendance system	10	L	Medium	New feature — still no coverage
7	MEN-1370	Student Schedule	6	M	Medium	Student-facing live classes
8	MEN-1560	Email verification	30	S	Done	Confirmed automated — `email_verification.cy.js`
9	MEN-821–825	Course Management	50	M	Medium	Good base — expand edge cases
10	MEN-985	Mobile App	1	XL	Low	Native app — exclude from web E2E
11	MEN-1726	Instructor Assistants	33	L	Done	Automated 20 Jul — full permission matrix, 33 TCs
12	MEN-231	Instructor ID Verification	11	M	Done	Automated 20 Jul — register → verify → publish gate

Coverage by Feature (Current)

Feature	Stories Automated	TCs Automated	Cypress Tests
Course Management	7/15 (47%)	7/129 (5%)	131
Payment & Finance	3/7 (43%)	35/145 (24%)	66
Live Sessions	4/10 (40%)	1/21 (5%)	20
Notifications & WhatsApp	4/7 (57%)	8/50 (16%)	54
Auth & Registration	2/9 (22%)	7/59 (12%)	127
Roster & Students	3/5 (60%)	14/41 (34%)	20
RBAC & Admin	1/6 (17%)	10/36 (28%)	63
CMS & Localization	1/2 (50%)	3/7 (43%)	70
Other / Not Automated	0/41 (0%)	64/469 (14%)	0

Coding Standards

- `it('MEN-XXXX | description', () => { ... })`
- One file per Story: `feature(MEN-XXX).cy.js`
- `before()` creates data · `it()` asserts only
- `loginViaApi()` for speed · UI login only when required
- Tags: `@smoke` `@regression` `@men-XXXX`
- No hard waits > 3 seconds

Exclude from E2E Target

- MEN-985 Mobile native app
- MEN-1482 Staging Server / infrastructure
- MEN-1495 Database backup
- Manual exploratory / subjective UX tests
- WhatsApp production send tests

Week 1 — Checklist

- ☐ Link all Jira TCs to Parent Story in AgileTest
- ☐ Add MEN-XXXX prefix to all 570 existing it() blocks
- ☐ Setup CI: cypress run + PublishTestResults to Azure DevOps
- ☐ Create instructor_finance(MEN-2005).cy.js skeleton
- ☐ Document test data users in support/users.js
- ☐ Fix git index.lock + single repo strategy (e2e vs parent)

Team Estimate

Team	Velocity	Reach 50% in
1 QA Engineer	~10 TCs/week	~10 months

2 QA Engineers	~20 TCs/week	~5 months

Suggested split: QA1 → Payment + Finance + Live Sessions · QA2 → Courses + Auth + Notifications

How Coverage Is Measured

Metric	Definition	12 Jul	20 Jul
Story automated (literal key)	MEN story key appears in a Cypress file (name or source)	19 / 104	9 / 105
Story automated (incl. verified untagged)	+ stories manually confirmed covered under a differently-named spec	—	21 / 105 (20%)
TC automated (all statuses)	MEN test case key appears literally in Cypress source code	154 / 978	177 / 966
TC automated ("Done" only)	Same, restricted to TCs Jira marks Done (i.e. already shipped) — the real risk metric	—	45 / 339 (13.3%)
Test volume ratio	Cypress it()/Scenario count vs Jira TC count	570 / 978 (58%)	625 / 966 (65%)

Note: the 12 Jul and 20 Jul Story/TC counts aren't a perfectly like-for-like diff — the underlying Jira export changed between snapshots (978 → 966 TCs, 104 → 105 stories) as issues were re-triaged. Jira CSV export still lacks TC→Story links (Parent key set on only 13 of 966 TCs on 20 Jul). Fix Jira linking for accurate per-story tracking without manual reconciliation.
